

GROUP PROJECT #1 — CONSUMER BEHAVIOR MARKETING

Drone Delivery and Consumer Behavior

Japan vs. France

Group Members: Manel, Lenny, Andre , Alina, N'jie, Giulia, Angylee

THE PRODUCT

Our Product: Door-to-Door Drone Delivery

Imagine a delivery service using drones that can deliver packages directly to customers' homes

KEY FEATURES

- 99.9% reliability
- Fast door-to-door delivery
- No delivery driver needed
- Convenient for everyday products
- Can reduce traditional delivery traffic
- Technology designed to be safe and reliable

THE QUESTION

Which foreign country would be most likely to embrace this service based on its culture and consumer behavior?

Our answer, and why, is what this deck sets out to prove.

Why Japan?

Japan is our strongest candidate because several cultural and consumer factors could support drone delivery

- 1 Technology-Oriented Society** — *Clear government framework, authorized in populated areas*
- 2 Convenience** — *Faster home delivery, time saving solution, everyday goods accessibility*
- 3 Aging Population** — *29.3% aged 65+, vital for isolated seniors, direct doorstep access*
- 4 Logistics Challenges** — *34% Delivery capacity shortage by 2030, relieves traditional courier strain, rural terrain coverage*
- 5 Trust & Reliability** — *Strict certification standards, certified flight operations and pilots, state-backed infrastructure*

EVIDENCE

Japan's existing drone logistics tests in rural areas

Japanese Consumer Behavior

Japanese consumers connect purchasing decisions to quality, service, cultural expectations, social influence and value.

RECENT RESEARCH ON JAPANESE CONSUMERS FOUND THAT:

- **HIGH QUALITY & DETAILS** -- Consumers pay close attention to product quality, presentation, service and delivery
- **OMOTENASHI -- SERVICE** -- Hospitality and excellent service are highly valued ; reliability should feel thoughtful and dependable
- **SOCIAL INFLUENCE** -- Word-of-mouth, peers and social environment can strongly shape willingness to try new products or services
- **PUNCTUALITY & DISCIPLINE** -- research describes punctuality, honesty and discipline as important cultural characteristics
- **MOTTAINAI** -- Avoiding waste and using resources wisely

MARKETING OPPORTUNITY

Drone delivery can turn advanced technology into better service. By reflecting omotenashi and mottainai, it can meet expectations for thoughtful service while improving efficiency and reducing unnecessary waste.

Innovation That Respects Tradition

おもてなし

Why France Could Be More Resistant

France could be a more challenging market because consumers may focus more strongly on the potential risks of automated drones

→ Higher perceived risk = lower adoption

Privacy

Drones could potentially record images around people's home, so people concern about personal spaces.

Safety

Consumers may worry about accidents or technical failures.

Cybersecurity

People may be concerned about hacking or misuse of the technology.

Environmental impact

Noise and the impact of drones on the environment could create resistance.

Trust

Consumers need to trust both the technology and the company operating it.

CULTURAL NOTE

French consumers tend to be interested in innovation. But also cautious and critical about its risks and impact

Japan vs. France

Consumer Factor	Japan 	France 
Technology acceptance	<i>High / established regulatory framework</i>	<i>Low-moderate / strict EU barriers and approvals</i>
Convenience	<i>High / valued as a practical societal solution</i>	<i>Skeptical / overshadowed by noise and nuisances</i>
Trust in technology	<i>Strong / state-backed and rural adoption</i>	<i>Low / fear of accidents, hacking and eco-impact</i>
Privacy concerns	<i>Manageable / camera and data transparency</i>	<i>High / backlash against domestic surveillance</i>
Safety concerns	<i>Controlled / focus on crash and cyber defense</i>	<i>Amplified / strict EU regulations and overflight anxiety</i>
Aging population	<i>Critical driver / urgent need for seniors</i>	<i>Secondary priority / preference for human service</i>
Rural delivery needs	<i>Essential / overcomes difficult terrain</i>	<i>Moderate / dense existing road networks</i>
Social benefit	<i>High / bridges labor shortages</i>	<i>Questioned / perceived disruption > utility</i>

OVERALL

Japan appears more culturally compatible with our product, while France could require more effort to overcome perceived risks.

How We Would Market the Service in Japan

The marketing strategy should focus on trust, reliability and social benefits.

OUR MESSAGE

"Your package. Your home. Reliable delivery."

1

High Reliability

- Proven 99,9% success rate
- Practical utility over "futuristic hype"

2

Speed & Convenience

- Instant app tracking
- Zero wait times and zero human error

3

Helping Older Consumers

- Essential aid for limited mobility and seniors
- Remote and rural area connectivity

4

Less Traditional Delivery Traffic

- Alleviates courier workload and driver burnout
- Road congestion and emissions reduction

5

Safety & Privacy

- End-to-end data encryption
- Strict flight safety protocols
- Mitigates uncertainty avoidance

Research suggests that communicating societal benefits and building institutional trust can significantly influence acceptance of drone delivery in Japan.

CONCLUSION

Japan Is Our Best Choice

Japan offers several favorable consumer-behavior conditions, while France represents a more challenging market.

JAPAN — WHY IT WORKS

- Strong interest in innovative technology
- High value placed on convenience and reliability
- Existing experience with drone logistics
- Aging and rural populations that could benefit
- Potential social benefits beyond convenience

FRANCE — WHY IT'S HARDER

France represents a more challenging market because privacy, safety, cybersecurity and environmental concerns could create stronger resistance.

FINAL DECISION

LAUNCH IN JAPAN

The key to success would be to build trust first, then communicate the convenience and social benefits of the service.
